
Handling In Windows

Champion Software Solutions, Inc. has provided a New CLASS of Information Management for the Boarding / Grooming Kennel managers to thousands of customers worldwide since 1995. Handling In Windows New Release 2 provides the ultimate functionality with Powerful Information Centers that One Mouse Click access all Owners, Dogs, and Shows. Powerful Sort Buttons arrange the Information in the Order that you need. This powerful and comprehensive system has been Designed for Windows XP with full screen view of all Information Centers. Major Functionality Features in the Handling InWindows© system is as follows:

Handling In Windows Overview:

The unique feature of the Handling In Windows(c) system is the "One Time Entry". File Maintenance is designed to store all information that will be retrieved throughout the program. The information is entered once and can be used multiple times throughout the program with out re-entering data. The more information that you have entered in File Maintenance the easier it is to enter the pet detail, print entries, prepare the judging schedule, prepare the monthly show schedule, generate the invoice, and print reports.

Show Information Management

For each individual show dog detail in the system there is a show detail screen. The Show detail screen allows the user to enter very specific details about the show, view all other show details and enter points awarded. The Show detail screen will automatically calculate the cumulative points to date. Also the user can select the Show History section where summarized show information can be viewed and printed.

Show Calendar

Once the show information and entry forms have been entered the Show Calendar report can be retrieved to view the upcoming show schedule. The Show Calendar report will list the upcoming shows complete with the show information and entry fees.

Vaccination Tracking

When handling, transporting and boarding multiple dogs it is very important to have updated vaccination information for each dog. The system allows the user to store various vaccination shot types in the File Maintenance section (one-time entry). Also from the individual dog detail screen there is a vaccination section that enables the user to select the appropriate vaccination types and enter the vaccination date. If any vaccination dates entered are over one year there will be a flag letting the user know that the vaccination is overdue.

Image Identification

For every show dog record in the program there is an Image section for storing images of the dog. This section allows for storing multiple images for each dog entered.

Accommodations Management

Since organizing a well planned show trip is very important, the Handling In Windows program contains an Accommodations management section. This section allows the user to enter the show name and the details about the hotel accommodations. Also on this screen the user can store a scanned image of a check or conformation itinerary details. The Accommodations section stores multiple accommodation records and also prints the entire information along with the scanned image.

Billing

The purpose of the Billing section is to enter all financial records, record specific owner/dog transactions and display and print invoices. The billing section contains three major sub menus. The invoice section allows the user to enter specific charge items and payment credits for each individual show dog. The invoice report screen can display information for a specific owner/dog according to a specified date range from the user entered From and To dates for the invoice. Other items that are displayed and printed on the Invoice include: Discount, Previous Balance, Balance due and Total balance at the bottom of the invoice.

Entry Schedule

The entry schedule is designed to retrieve the show name (entered in file maintenance) and then retrieving the show dog's registered name. The user can select any number of show dogs. The entry schedule has a view option for viewing all entries before printing. Once an Entry Form is printed for a show dog the client/dog's record will automatically be charged for the Entry fee.

Judging Schedule

The judging schedule has been designed to follow the same format of a Judging Program. After the user selects the show name the list of dogs that have been entered will appear on the list. The judging schedule includes the following: Time, Ring number, Breakdown, Comments, Call name, Owner and Placement. The judging schedule will calculate the number of dogs in front by 2 minutes a dog. For example, 30 dogs in front at 10:00 the program will change the show time to 11:00.

Handler Contract and Price List

Typically in every Handler's business a contract and the price list is often given to new clients. The Handling Contract has been designed to print in the pet detail section. The contract prints out the information according to the information that is on the pet detail screen. This option will help reduce the time of filling it out and the contract will be correct while adding professional flair. The price list will print the Charge Items that the user has listed in the Financial section.

Summary

Handling In Windows system is available on Installation CD which includes Documentation subfolder, full Getting Started Manual, Full Sample Database application and Comprehensive On-Line Help. New Customer package includes Quick Start Guide, and New Release Features Summary. The new Release of Handling In has been designed for Windows XP.
